Heavy Duty

Trash & Loose Material Hoppers

for Skid-Steer Loaders

model 151

Handle Trash Efficiently and Easily.

Hoppers attach directly to the skid-steer quick-tach making it easy to place empty hoppers where they are needed. When full, the skid-steer can quickly transport the hoppers to the disposal area and dump into larger containers or onto a trash pile. These durable hoppers are ideal for concrete rubble, wallboard scraps, drop from the masonry saw, and most any type of construction or plant refuse.

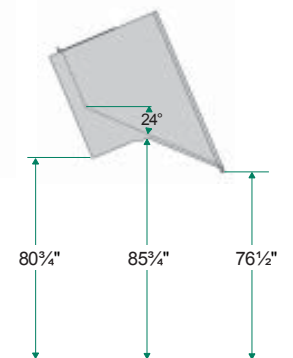

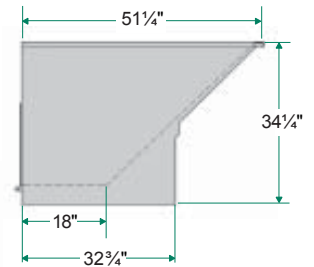

Deliver & Place Landscape Materials, Sand, and other loose materials at a lower cost.

Landscape contractors love the new skid-steer trash hoppers. At the yard a skid-steer can quickly fill the hoppers with landscape materials such as gravel or mulch, and load them onto the truck for delivery. At the jobsite a skid-steer picks the loaded hoppers off the truck and dumps the material right where it is needed in the landscape. This provides a streamlined efficient method for getting material from the material yard to the jobsite placement area with minimal re-handling, less material loss, and fewer costs.

Heavy Duty Construction for long-term durability.

These hoppers are built rugged. In fact, they will probably outlast your skid-steer loader.

- ▶ Shell & sides are constructed of rugged 3/16" steel plate.
- ▶ Entire Top Lip is formed into a channel section for added strength & rigidity.
- ▶ Heavy 1/2" x 3" flat bar is formed to provide a stable base when the hopper is free standing.
- ▶ Reinforced Heavy Duty Universal Quick-Tach fits most skid-steer loaders.
- ▶ Forklift pick-up points are provided for moving hoppers around the yard or loading onto trucks.
- ▶ Optional Casters – makes it easy for one man to push a hopper around inside a building.

Typical Dump position at maximum height with medium size skid-steer. Dimensions will vary with make and model of loader.

Model	ID width	Capacity	Weight
151	48"	1.00 cuyd	558 lbs.
152	72"	1.50 cuyd	700 lbs.
153	84"	1.75 cuyd	775 lbs.
